## Ideas

### 1. Event Finder

The event finder would be an improved application of different services like Facebook, MeetUp and Eventbrite. Currently, finding different events on campus would require the student to be in different student groups, clubs or scavenge different websites. These services also have trouble finding niche hobbies or activities, things like movie nights, food clubs, pickup or drop-in sports. A proper event finder application would allow campus events to be in one platform, granting easier access for students. Unlike Facebook Events or MeetUp, finding an event you like is hard, unless you are in a group or a student club. Meetup, the event list is populated with corporate events advertising their services. This is painful for the end-user, and the whole process could be implemented efficiently. The app will let students, clubs, groups and faculty to host different events around campus. A key feature will also be letting the students start and events with more niche hobbies. So, this platform will let students find different study groups, and connect with other students with similar interests and hobbies. The platform's goal is to create an efficient network of events for different hobbies and activities on campus.

Initial Ideas:

- Host and Join Events
- Student Profile
- Hobby/Interest discussion thread
- Student Group/Club Profile
- Promoted Faculty/University Events
- Gamification – Reward System (Badges upon joining and hosting events)

### 2. Study Seat Finder

The study seat finder will show which seats are available on campus. Currently, students have to walk through every floor of the library, or different buildings to find a seat. A status checker will help make the process of studying at school more efficient by eliminating the need to consistently finding a studying desk. The app will have each the layout of each study seat according to the real floor plan of the building. From there, you will be able to see the status of each seat in the different buildings. The application will also allow groups to form study groups and book large study rooms across the campus. Walking around campus trying to find a seat, is very tedious and hopefully this application would eliminate and streamline that process. With the features above, students will also be able to check classroom availability to see if they can study inside. With this application, it will help improve the studying methods at school by letting students plan out where they want to be during the day. Letting students find the most optimal area to study and also attend class.

Initial Ideas:

- View study seats around campus and check their current status
- Classroom status
- Study group finder
